

500KV Angle Steel Transmission Electric Distribution Tower

Mao Tong is a professional leader China 500KV Angle Steel Transmission Electric Distribution Tower manufacturers with high quality and reasonable price. Angle steel tower, quadrilateral structure power tower, using Q345B high quality just as the main material of the tower body, steel structure, small deformation, Angle steel splicing-connection, parts light weight, can be fully manual handling and installation, low project cost, the tower body can be equipped with 6 layers of platform, each layer of platform can be hung 6 antennas.

Product Description

As a professional high quality 500KV Angle Steel Transmission Electric Distribution Tower manufacturers, Mao Tong is a professional steel structure tower research and development, production, sales and provide tower design, engineering, maintenance of production and service enterprises, we focus on mobile operators, security monitoring requirements, building developers to provide excellent products and professional services.

The main features

500KV Angle Steel Transmission Electric Distribution Tower is mainly used to build stations in areas where machinery and large vehicles cannot reach, such as mountain, countryside, urban and rural combined belt, highway and railway.
